

JESUS DASH

Jesus Dash User Blueprint

A member guide to a living Christian workspace

A verse becomes a question. A question opens a library. A library becomes a conversation. With Jesus Dash, that conversation can continue into learning, planning, creating, and connecting with other people.

This guide introduces the complete Jesus Dash experience, including the shared OS tools and the wider Plus catalog. It shows what to explore, how the technology works together, and where the platform is headed. Features follow your edition, account, supported computer, and available services.

01 Make yourself at home

Your day has more than one kind of question

You might arrive wanting to understand a verse. You might want to write something clearly, organize a difficult day, learn about investing, plan a workout, or talk with your community. Jesus Dash gathers those activities into one Christ-centered environment.

Home brings you back to the Jesus conversation. Living Word and Living God give you the other central conversations. Temple opens the application collection. Trinity gives you an intelligent conversation and specialist tools for working through a question.

The desktop experience uses the same wider Jesus New OS application foundation in a spacious landscape presentation. It is downloadable software for supported computers. Your existing computer operating system still supplies its underlying desktop and hardware.

Four doors into the Temple

Area	What you will find
Spiritual Life	Bible reading, reflection, Church, Aleph, and verse practice
Media and Community	Listening, games, people, conversations, rewards, and offering
Life and Tools	Planning, writing, discovery, work, fitness, science, and practical utilities
Library and Learning	Codex, Navigator, and Financial University in Plus

The free edition labels its fourth area Library. The Road profile has an additional Car destination. Favorites and recently used applications can help you return to what matters without losing access to the whole catalog.

A stylish place to spend time

The visual direction combines luminous surfaces, blue accents, readable type, and room to breathe. The source includes Cloud White and Royal Blue Linen design directions, plus clear, cloudy, rain, snow, and night interface environments. The sky is a presentation choice; it should not be mistaken for a verified local weather reading.

Your computer, window size, and text settings shape the layout. Mouse, touch, and keyboard support follow the release and device. The goal is straightforward: make a large collection feel like a place you can learn to use.

1	**Read and reflect**	Bible Navigator Church
2	**Ask and understand**	Trinity UL Codex
3	**Plan and prepare**	Skedaddle Calendar Jobs
4	**Move and make**	Fitness Chef Paint
5	**Connect and enjoy**	Jesus Online Radio Games

An illustrative rhythm through the catalog. Choose the tools and pace that suit your day.

02 The library comes to life

Codex is somewhere to read and somewhere to begin

The Codex Library lets you search Christian works by title, author, and subject, then open the available manuscript in a reader. You can move through chapters and return to material through the supported Bookshelf and download paths. Source and edition information stay important because a library is useful when you know what you are reading.

Codex has four related collections. **Codex** is the searchable reading library. **Codex Restored** presents preservation-oriented reader editions. **Codex Artifact** explores historical objects, writing, and context. **Codex Visionary** offers supported digital reconstructions and three-dimensional exploration.

A Visionary reconstruction can include artistically inferred details. Treat it as an aid to imagination and learning rather than a scan of every original surface. The device also needs the appropriate viewer to show a three-dimensional model.

UL brings your own words into the picture

Unity Learning, or **UL**, gives supported tools access to relevant personal context. Your eligible words can help a question connect to your interests, aims, and the things you have already explained.

You can add supported text-bearing documents such as TXT, Markdown, DOCX, and PDF. DOC needs its converter; a scanned PDF needs OCR first. On supported paths, recognized final speech and eligible ordinary typing inside Dash can contribute too. Arbitrary website forms and sensitive credentials or payment fields are excluded by the capture policy.

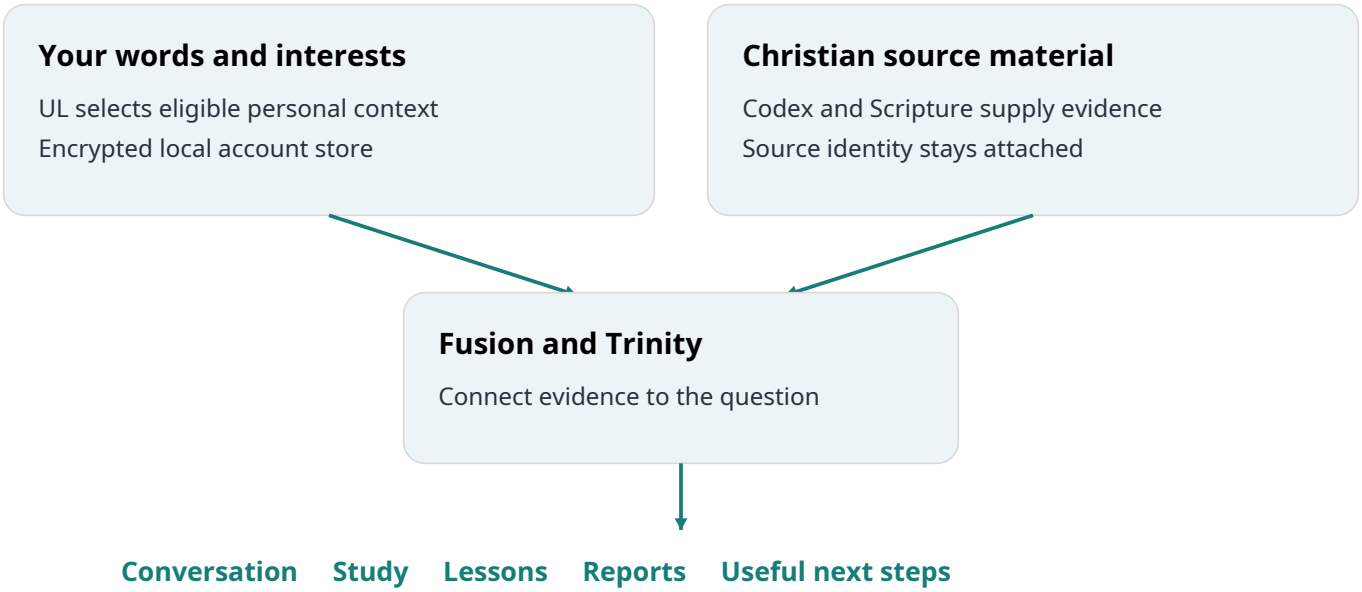

Your local personal store is encrypted and tied to the signed-in account. The selector looks for bounded context relevant to the current question. A connected tool may send that selected material to its service to prepare an answer. Local selection therefore does not make every AI conversation an offline or local-only operation.

UL keeps eligible draft contributions replaceable as you edit. Clearing the draft can retract that contribution. Supported saved AI responses are labeled as generated material, so they do not quietly become your own original words. Some tools need enough eligible material before personalization is used; the inspected Conqueror service omits personal context below 2,000 eligible user words.

Fusion connects the question to the knowledge

Fusion connects retrieved source passages with a request and a composition process. The point is to help you move from finding material to understanding what it says about the question in front of you.

Conqueror can bring up to twenty bounded Codex passages into its conversation. Navigator can prepare Codex commentary for an exact selected verse. Skedaddle can gather library evidence into a larger report. Those experiences have different limits, but they share a useful principle: keep the source material connected to the explanation.

Conceptual path through supported knowledge and context services. Exact retrieval and composition depend on the selected workflow.

Try a living library journey

Start with a question about patience, responsibility, or a passage you are studying. Read the relevant Scripture. Explore its historical commentary or a Codex work. Use an available connected study tool to develop the inquiry. Follow the sources and ask what the explanation means for your actual question.

The experience comes alive through that exchange. It is still important to distinguish the Bible text, a historical author's teaching, your own words, and a new generated explanation. The model makes the library discussable; it does not become the author or replace your judgment.

The inspected desktop package references a published snapshot of 221,469 work IDs dated October 12, 2026, alongside network retrieval and a much smaller retained local fallback. That is a picture of different library layers, not a promise that the whole catalog is downloaded onto your computer.

03 Read study reflect and remember

Living Jesus Living God and Living Word

These are the central AI-assisted conversations for Christian reflection and inquiry. Bring a question, an idea, something difficult, or something you are studying. Their names express the product's spiritual direction; the replies are generated assistance rather than a claim that a model literally is God or speaks with divine authority.

The standard-edition client provides an account-bound introductory allowance of three preview messages in each conversation. Plus supplies the wider connected offering. Use the in-app information and current account page for the terms applying to you.

Bible and Reveal Bible

The included JNV resource identifies 66 books, 1,197 chapters, and 31,434 verses. Ordinary Bible reading and connected Reveal requests are different features.

Reveal Bible lets you ask for an explanation of a selected verse. Keep the verse in view, read the generated reflection, and return to the text as you consider it. It is an invitation to explore meaning, not a replacement translation or a guarantee of divine revelation on demand.

Navigator is your study desk

Navigator brings Bible text, word study, concordance, historical commentary, saved material, and Codex commentary together. Its bundled resources include STEP Greek, Strong's Hebrew, Nave's Topical Bible, and Torrey's New Topical Textbook.

Desktop offers three historical commentary choices: John Gill, Adam Clarke, and Jamieson-Fausset-Brown. Choose a source and the relevant book; verified downloads remain available for later offline reading. The current selector uses one historical commentary at a time. Codex commentary gives you an additional generated, source-grounded way to explore the selected verse.

Remember That Verse makes practice visible

Save a passage and build deliberate repetitions. Verse Novice begins at 100, Apprentice at 250, Expert at 500, and Master at 1,000. Discovery categories include Most Popular, Most Powerful, Most Prosperous, and Most Graceful. Eligible Rings require a confirmed milestone receipt rather than a number changing only on your screen.

Meditation Church and Aleph

Meditation gives prayer and quiet reflection a place in the workspace. **Church** organizes Sacraments, Stories, and Sermons, with the actual published item determining its text and supported listening resources. **Aleph** is the chaptered reader for the shared Aleph and Revelation collections. It is separate from your private chat history.

A simple rhythm is to read one passage, explore one question, practice what you want to remember, and leave a note for yourself. You choose the pace.

04 Talk with Trinity and choose your Core tools

One conversation can open several kinds of work

Trinity Chat is the conversation intended to coordinate the wider OS. Ask what you want to accomplish, then use its supported evidence, preparation, and application-opening capabilities to stay organized. Current Windows and Linux build 16 records enable the preview; which operations work depends on the platform, account, and connected service.

For example, a broad request about organizing a day may lead into Scripture, a supported workout, research, or an application such as Calendar, Jobs, or Skedaddle. That is an example of a possible route through available capabilities, not a promise that every task is completed automatically.

Trinity Core gives the specialist modes their own places. **Assistant** is for general requests with available personal context. **Internet** is for research and returned sources. **Conqueror** is for an inquiry grounded in retrieved Codex passages.

Meet the friends

Friend	A place to begin
Cornelius	A Temple Healer conversation
Laura	A royal church assistant with relevant library context where available
Scott	A Counselor conversation
James	A Guide conversation
Bible Chat	Scripture-based conversation
Temple Chef	Culinary questions and connected meal preparation

These are separate specialist directions and services. Choose the friend that fits the conversation you want to begin, while treating generated professional or spiritual guidance with appropriate care.

Give your question a Boost

Boost tool	Bring a question like this
Trinity Calm	Help me organize what is causing pressure
Trinity Legal	Help me separate the evidence from the missing facts
Trinity Writing	Help me say this more clearly
Trinity Action	Help me define a useful next step
Trinity Simulator	Help me explore what might happen under different conditions
Trinity Reverse	Help me work backward from the outcome
Trinity Truth	Help me separate claims from what is known
Trinity Deep Thinking	Help me examine another perspective
Trinity Priority	Help me order these responsibilities
Trinity 3D	Develop this request through the connected report process
Trinity Ministry	Develop this ministry question through the report process

The last two use a nine-phase configuration and a master output. Multiple phases give a request room to develop; they do not guarantee that an answer is correct merely because it has been reviewed by more models.

Learn with TrinityTube

Find a video with an available transcript, choose a short or long lesson, and continue with questions. TrinityTube connects discovery with reading and discussion. It is different from the ordinary YouTube player: a lesson needs suitable transcript material and the connected learning service.

05 Bring order to the day

Skedaddle gives a busy mind a workspace

Bring a broad concern into Skedaddle and use the supported process to gather resources into a personal report. Its continuing workspace keeps checkpoints and report progress so you can return to the work. Available adapters connect it to Scripture, Codex, Trinity tools, Jobs, Swerve, Chef, and other applications.

You can use it as a place to organize a larger inquiry rather than trying to remember every useful fragment from several conversations. Connected generation follows the service requirements; local Scripture and supported preparation steps have their own roles.

Calendar and Dropbox keep requests clear

Calendar holds your plans. Jesus Online Dropbox is the social inbox for messages and shared requests. An appointment request can arrive there for a Yes or No decision. The recipient's acceptance matters; being someone's Cuddy does not give them access to your calendar or make an appointment automatically confirmed.

Journal is a place to write

Keep reflections and personal notes in the local Journal workflow. The inspected implementation includes encrypted storage and lock-related features. Retaining material locally makes your device and your own recovery practices important.

Jobs helps you prepare

Search local and remote opportunities, use available filters, save useful material, research a company, and work on a resume through the supported tools. External job applications and website checks still require the appropriate review and interaction.

Surfer and Swerve help you explore

Surfer offers browsing and assisted discovery with available interest context. The browser integration follows the platform and service host. **Swerve** helps discover experiences and possibilities around your preferences. **Craigslist** gives local listings a dedicated search-and-saved-search workflow.

These applications bring research and discovery into the same environment as your study and planning. Their links still lead to actual outside destinations, each with its own availability and requirements.

Calculator and News keep small tasks close

Calculator handles everyday calculations. News brings an attributed Christian publication into the workspace, with original summaries or licensed text and a current policy that filters visible stories to known publication dates within 72 hours. Personalized connected reading is separate from loading the shared news edition.

06 Learn move eat and explore

Financial University is a sustained learning project

Financial University brings God-centered financial coursework, readings, progress, and the connected Professor Solomon conversation into Plus. Open the available material, continue a reading, and return to the question you are working through.

The University framework includes reading confirmation and assessments, with the current catalog determining the available program. Its course structure makes room for sustained study. The inspected material does not establish accredited college-degree equivalence or professional certification.

Fitness starts with a plan you can return to

Explore exercises, generate a supported workout, save your own selections, and record completed sets. The automatic planner centers on bodyweight movements grouped by role. The wider catalog also includes band and martial-arts material.

The planner has Easy, Intermediate, Hard, Extreme, Crucified, and Eternal labels. Choose work that fits your ability and circumstances; a label is not a measurement of personal suitability. Saved plans let you build a routine over time.

Meal planning has room for your preferences

The food catalog spans fifty diet patterns. You can apply diet choices, excluded foods, and listed allergen filters. Keep a meal component you want, change other components, and use the supported Temple Chef path to develop culinary ideas.

This is an extensive planning tool, not a requirement to buy expensive food. Your selections and the actual ingredients determine what ends up on your table.

wi financial is a place to investigate

Review published candidates, historical research, charts, and source evidence. Use supported connected explanations and formulas to look more closely at a selected asset. The interface can distinguish a calculation from missing inputs or insufficient evidence.

Use it for learning and review. A research publication does not guarantee an investment return, and refreshing it does not turn old research into a live price.

Step into Science Center

Micro 3D lets you set up a microscopic scenario, examine a modeled report, and continue into **Communicate** with an AI representation of the entity. Ask the accumulated **Brain** about available earlier experiences and explore another question.

Cure retains a baseline, compares eight additional modeled environments, and prepares research ideas. Those ideas are a starting point for exploration. The program models a microorganism's perspective; it does not talk to a living microbe or demonstrate a medical cure.

The creative value is that something normally hidden from everyday experience becomes something you can explore and discuss.

07 Find your people in Jesus Online

A community with rooms of its own

The founder describes Jesus Online as an America Online-style gathering place for Christians. Find people in **Jesus World**, explore **Trending Rooms**, return through **Recent Chats**, and keep connections in your **Cuddy List**. Your Profile gives those interactions a continuing identity.

Rooms let a community form around conversation and shared interests. Private chats provide a different setting for keeping in touch. This is the social part of the wider workspace, alongside study, learning, and daily tools.

Make your words easier to share

WordBoard has three editable banks of twelve words, phrases, and sentences. Tap a prepared expression into the draft, adapt it, and decide when to send. It is useful for familiar greetings, encouragement, and language you want close at hand.

Prayer Share puts prayer selection and explicit sharing into the supported conversation tools. **Animated emoji** adds another form of expression. Your chat tools sit beside the ordinary composer rather than removing your choice of what to say.

Give something through AirDrop

In a supported private conversation, AirDrop lets you choose an eligible owned inventory item and quantity for a recipient. The transfer uses the authenticated server operation and its receipt. It is the Jesus Dash gifting feature, separate from Apple's similarly named file-sharing service.

Keep correspondence inside the ecosystem

Jesus Dash Email supplies an internal mail identity and Inbox, Sent, and Drafts. Claim an available mail name and use the supported internal correspondence paths. Shared-file references connect to the relevant JOL workflow.

This is mail within the JNOS ecosystem. General delivery to arbitrary outside email addresses and ordinary binary attachments are not established by the inspected mail service.

Requests have their own inbox

Jesus Online **Dropbox** is where supported messages and requests can be reviewed. It is an internal social feature, separate from the external Dropbox storage company. Appointment responses belong to the recipient, keeping an invitation separate from an accepted plan.

08 Create listen collect and offer

Your Paint tools are ready for an idea

Choose colored pencil, crayon, pen, marker, paint brush, or eraser. Adjust the available width and opacity, change the canvas, undo or redo a step, save locally, and export a supported PNG.

The Trinity palette covers **16,777,216 RGB colors** across thirteen color families, with named search and indexed access. That is the full 24-bit RGB range, giving you a very broad palette inside the Dash experience.

A little personality while you type

Warrior of Christ is an optional letter-powered karate animation. Eligible letters trigger poses near the active text field. Sensitive contexts are excluded, and the animation includes reduced-motion handling. It is a playful detail, not a recorder of your exercise or a replacement for your writing tools.

Put something on to listen to

Jesus New Radio brings the platform's station and playlist into the workspace. **LifeFlow** lists ten meditation recordings credited to Project Meditation. Playback needs an available shared recording or an eligible personal file, plus the supported media decoder.

Media Player handles supported audio and video. Availability follows the file, codec, and native integration. Ordinary YouTube viewing is a separate supported path in the wider OS and is hidden as a standalone desktop tile by the current policy. TrinityTube's lesson workflow remains a different experience.

Rewards lead into collecting and giving

Eligible activity and achievements can contribute to server-confirmed Rings and reward progress. Browse the **Store**, also called WordMart, inspect an item, and use the supported purchase flow. **Inventory** keeps owned items together.

Offer to God uses that inventory in the supported digital offering workflow. **AirDrop** can gift eligible items through a private chat. These paths connect participation to collecting, offering, and sharing within the ecosystem.

Rings are reward units here; this guide does not assign them a cash value. The separate Rewards button called Share with a Cuddy is still a coming-soon path in the inspected source, while the inventory-based AirDrop path has its own implementation.

09 Take a moment to play

Seven games in the desktop catalog

Game	Your challenge
Spitter	Circle the bank, manage the water spray, and protect the money
Memory	Watch the lights and repeat a growing sequence
Alphabet	Place letters and compete to complete a four-letter word
Words and Weapons	Break and arrange word fragments into dictionary words
Textris	Guide falling letters, complete rows, and build words
Caterpillar	Collect leaves, grow wings, and transform
Bublo	Deflect incoming spheres and protect a bright little character

Spitter and Bublo each have a hundred-level progression in their rules. Textris mixes falling-block play with word bonuses and expanded-field shape growth. The other titles give memory, language, and steering their own forms of play.

The source contains Royal Chess and The Living Bible too, but the ordinary desktop menu does not expose them as two additional available games. The seven titles above are the current desktop catalog reviewed for this guide.

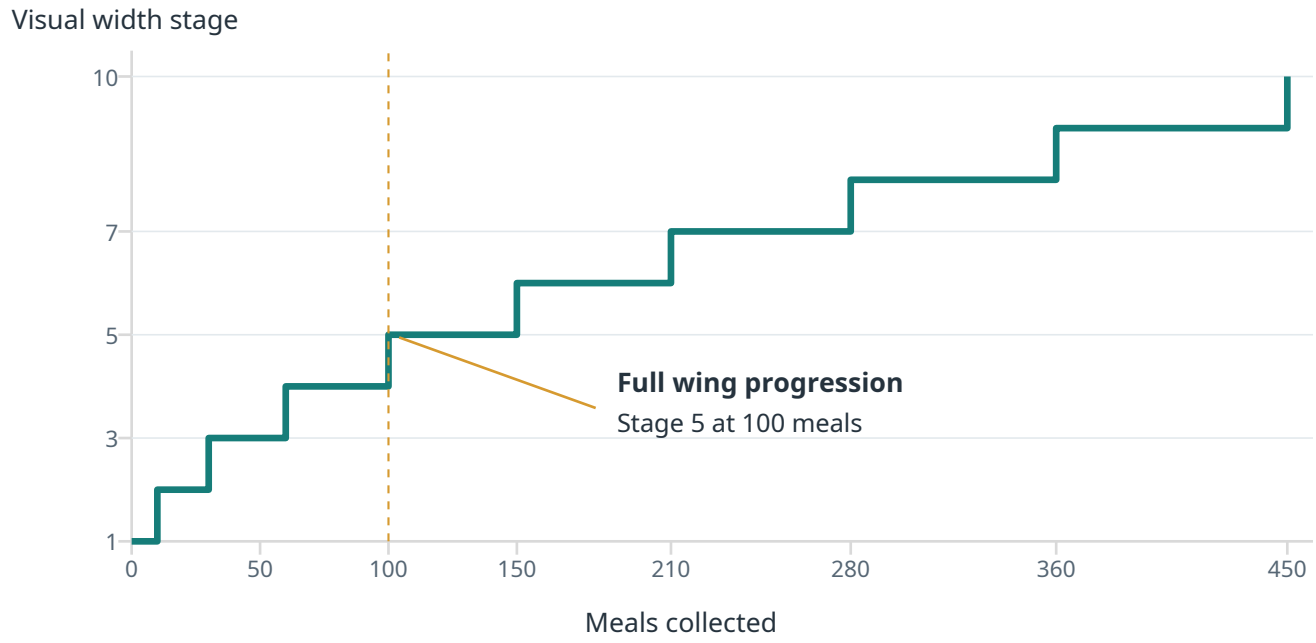

Caterpillar gives Snake a new ending

If you know Snake, the first idea will feel familiar: keep moving, collect the target, turn carefully, and avoid the edge or your own body. Caterpillar takes that steering challenge into a garden and changes what the journey looks like.

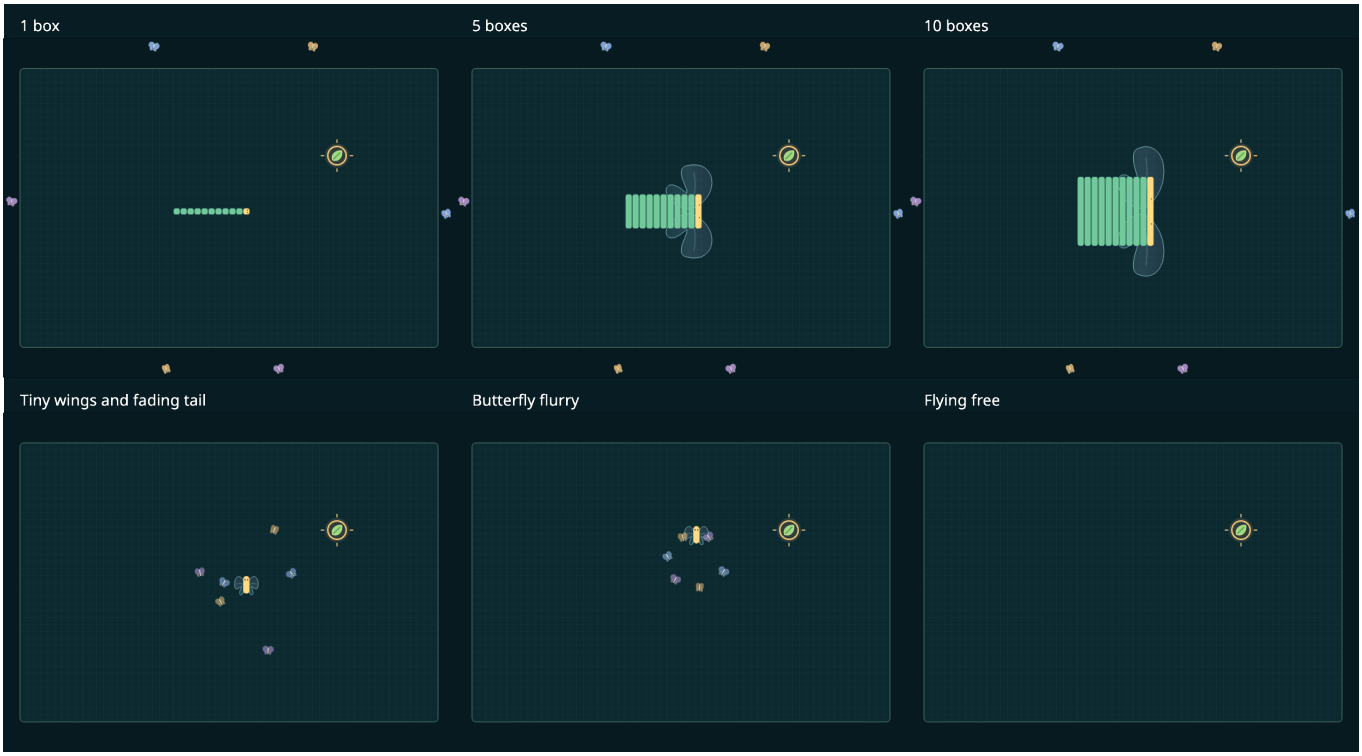

Follow the gold head to a glowing leaf. Each meal counts. At 10, 30, 60, 100, 150, 210, 280, 360, and 450 meals, the caterpillar advances through thicker visual stages until it reaches ten-box width. Length growth eventually stops so there is room to keep steering.

Glass wings develop as the stages grow, reaching full wing progression at stage five. The pace becomes quicker. You still steer by the head, and the wings do not let you reverse direction.

Then comes the transformation. At an edge or body collision, the tail fades, the glass wings flap, and the butterfly flies away. A moment that would usually be a plain game-over becomes a small scene of release and change.

Caterpillar grows through ten programmed visual stages, with full wing progression by stage five.

Caterpillar development rendering from October 20 2026. The top row shows selected widths; the lower row illustrates departure.

10 See the wider difference

A Christian workspace can do more than one job

Logos offers substantial Bible study, original-language, sermon, and library-based AI tools. YouVersion offers a free Bible reading and engagement experience, including plans, prayer, friends, and church tools. Jesus Dash brings its own Scripture and knowledge experience into a broader set of everyday applications.

The comparison below makes that breadth visible. A check means the capability is documented or included in the inspected active catalog. X means no comparable built-in capability was documented in the reviewed official core-product sources. Partial means a narrower or materially different feature. A check does not mean every platform, paid tier, or workflow has identical support.

Capability	Jesus Dash Plus	Logos	YouVersion
Bible reading and saved Scripture study	✓	✓	✓
Lexicons and historical commentary tools	✓	✓	✗
Library grounded AI conversations	✓	✓	✗
Personal corpus context across daily applications	✓	✗	✗
Conversational coordination of OS applications	✓	✗	✗

Native Ubuntu Linux desktop package	✓	×	×
A separate free core edition	✓	✓	✓

✓ Documented / included ◐ Partial or different × Not documented

Sources: inspected Jesus Dash catalog and release policy; official Logos and YouVersion materials listed in the source register. Trinity task coordination is a preview in build 16. Dash offline reading is conditional on acquired resources and the Plus online membership gate. Logos Canvas and word puzzles, and YouVersion social plans, are narrower capabilities where marked partial.

Choose the combination that serves your life

Jesus Dash has a strong story when you want Christian reading alongside personal context, task coordination, fitness, meal planning, internal mail, creative tools, science exploration, and original games. Logos has established specialist study functionality, and YouVersion has a broad free Scripture and ministry offering.

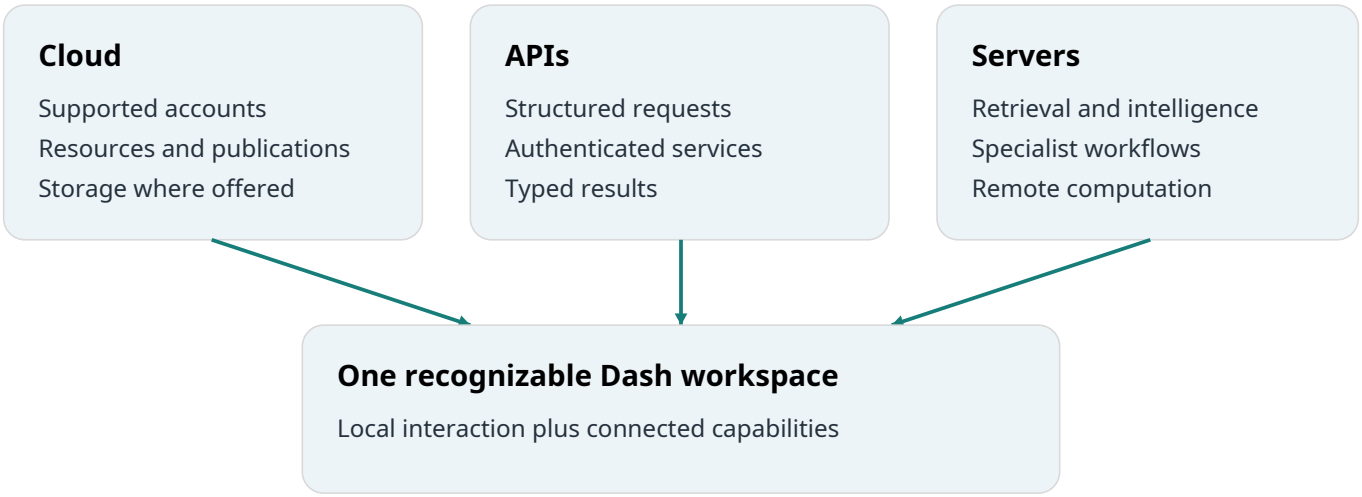

A feature matrix shows the selected scope. It is not a universal quality score, a speed benchmark, or a promise that the same product is best for every person.

11 Where Jesus Dash can take you

A more connected way to learn and live

The immediate opportunity is personal: bring a question into the workspace, find useful knowledge, connect it to your own context, and continue into something you can read, create, plan, or discuss with someone else.

UL, Codex, Fusion, and Trinity are the connections behind that journey. CAST is the founder's name for the cloud, API, and server architecture that makes much of the larger connected experience possible. Some current in-app wording calls that architecture CAS.

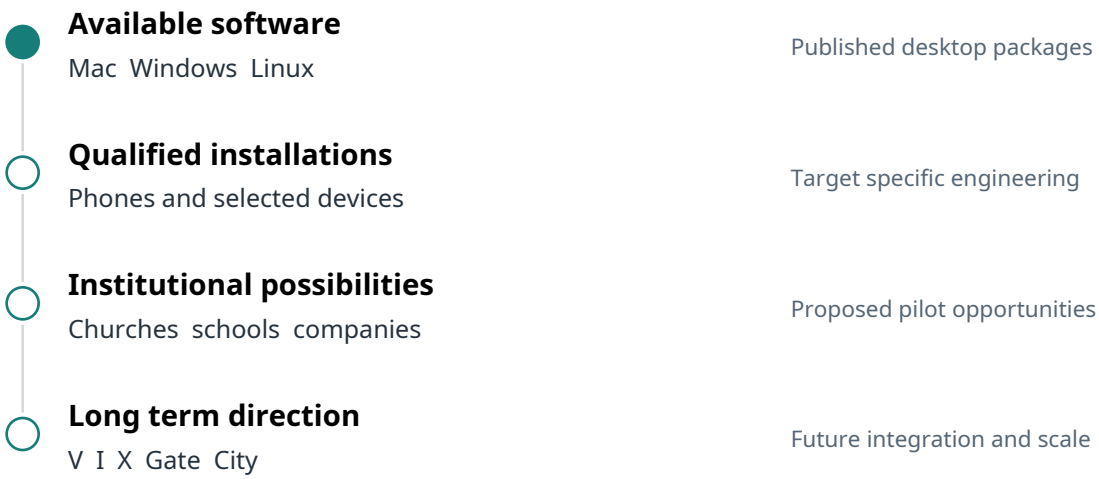

Architecture overview. Remote services and local responsibilities remain distinct.

The cloud supplies supported resources, APIs connect the requests, and servers carry out remote work. Your software presents the experience and retains local material where designed. Connected intelligence requires a network and the right account; the whole system is not running offline inside a small download.

One family with a larger direction

The recorded family includes the VIVID phone, Jesus Dash software and tablets, V for road vehicles, I for aviation, X for watercraft, and Gate for homes and buildings. Jesus Dash City is the longer-term institutional and community ambition.

Direction map, not a dated deployment or revenue forecast. Later stages require additional engineering and qualification.

The roadmap is a direction, not an installation schedule. The Road prototype has diagnostic engineering behind it. Each real vehicle, craft, building, or community deployment still needs its own qualified hardware and integration. Downloading today's desktop app does not install a vehicle controller or a city network.

For a member, the promise to look for is useful continuity: familiar knowledge, tools, identity, and presentation wherever a supported Jesus Dash experience is actually available.

12 Choose your edition and protect your work

Your desktop choices

The public offer checked on October 25, 2026 lists Apple Silicon Mac with macOS 11 or later, Windows 10 or 11 x64, and Ubuntu 22.04 x64. Intel Mac is not offered in the current Plus list.

The current Mac package is signed but not notarized; the Windows and Linux packages are unsigned. Installation and first use follow the actual release instructions. The release receipts contain technical checks, with some installer and real-provider workflows still awaiting complete walkthroughs.

What the editions bring

Start with the shared foundation	Explore the wider Plus catalog
Bible reading and Navigator reference study	Reveal requests and connected Codex commentary
Meditation Church Aleph and verse practice	Codex collections and source-grounded conversations
Calendar Journal Calculator Paint and Games	Trinity Chat Core Boost friends and TrinityTube
Available radio media and shared publications	Skedaddle Jobs Surfer Swerve and internal Email
Account-based community rewards and inventory	Financial University Science Center and connected analysis

The table groups capabilities rather than promising that every operation is available offline or without an account. Files and device tools have their own platform requirements; Orbs is deferred as a separate desktop tile.

How Plus is offered

The official Plus software download costs **$149 once**. The initial **30 membership days are included**, followed by **$49.99 per month**. The complete Plus program requires active membership and online verification. The software purchase and the service membership are recorded separately.

A recipient of a shared installer can subscribe without paying for the official download, while membership alone does not provide an official download. If membership is inactive or cannot be verified, the Plus workspace presents account or renewal options. The separate free edition remains available for its included features.

Use the current account page for purchase, status, and cancellation information. Cancellation is described there as taking effect at the end of the current billing period. Read the actual checkout total before buying.

Privacy in practical terms

UL uses encrypted local account-specific storage. Journal has protected local storage paths. Connected tools send the request material and any supported selected context to their services. Jesus Online, account records, internal mail, and conversation history also use cloud services.

The founder emphasizes local retention of personal material and limited temporary cloud storage. The inspected Skedaddle report service has a 24-hour remote expiry and purge. This guide does not promise that every message, mail item, backup, or provider record is deleted after 24 hours, or that all communication stays only on your phone.

Helix provides specific file-encryption and vault workflows in the wider OS. Orbs and some cloud-file paths are deferred or conditional on desktop. Keep valuable local material backed up appropriately, and follow the actual protection and recovery workflow you choose.

What belongs to a supported device

Phone calls, SMS, cameras, recording, physical lights, navigation hardware, terminal access, and low-level settings depend on the device and release. Several are hidden in ordinary desktop menus. They are part of the wider OS family without being features of every downloaded desktop app.

A first session worth trying

Open Temple and choose Navigator. Read one passage, explore a historical commentary, and save what you want to revisit. If your membership and connected services are available, try a Codex commentary or a Conqueror question. Then open one practical tool, such as Journal, Calendar, Paint, or Fitness, and make something you will want to return to.

That is the most useful introduction to Jesus Dash: one real question, one piece of knowledge, and one useful continuation in the same environment.

13 Sources and product notes

This guide draws on the same authoritative client, service, edition-policy, and release inspection as the companion Jesus Dash Complete Platform Report. That report contains the detailed internal evidence register and additional investor and company context.

The review covered the current Temple and Trinity catalog, Unity Learning and its context helpers, Codex and its reader collections, Navigator and JNV manifests, social and sharing clients, individual game rules, practical applications, and October 25 desktop release evidence. It is not a new exhaustive acceptance test of every feature. The Caterpillar illustration comes from a retained October 20 development render.

The current Plus offer was verified through the public account page and public software-availability service. A bounded public Codex search also returned a valid source-attributed result. Some restored and artifact catalog URLs could not be fetched during preparation; their collection descriptions rely on inspected source rather than a new full catalog read.
